

Environmental Studies Course objectives

1. **Environmental Awareness:** Develop a deep awareness and appreciation of the natural world, its ecosystems, and the interdependence of all living organisms.
2. **Environmental Issues:** Examine and analyze current and historical environmental issues, including climate change, pollution, habitat loss, biodiversity loss, and resource depletion.
3. **Sustainability:** Explore the concept of sustainability and its application in various contexts, including energy, agriculture, urban planning, and conservation.
4. **Environmental Science:** Gain a basic understanding of environmental science principles, including the Earth's systems, ecosystems, and the scientific methods used to study the environment.
5. **Environmental Policy and Ethics:** Investigate the legal, ethical, and policy frameworks that govern environmental protection and management, as well as the role of individuals and societies in environmental decision-making.
