Assessment Information

Red List Category & Criteria: Near Threatened B1ab(iii)+2ab(iii) [ver 3.1](#)

Year Published: 2022

Date Assessed: July 12, 2020

Justification:

Orophea uniflora is a tree species endemic to the Western Ghats, India. It has a restricted distribution, scattered sparsely, with an extent of occurrence (EOO) of 13,281 km² and area of occupancy (AOO) of 60 km². This species occurs in areas that have been subject to habitat loss primarily from conversion to monoculture forest plantations, agricultural expansion and urbanisation. It is known from at least 14 locations and is assessed as Near Threatened.

Previously Published Red List Assessments

1998 – Vulnerable (VU)

<https://dx.doi.org/10.2305/IUCN.UK.1998.RLTS.T31160A9610284.en>

1998 – Indeterminate (I)

Geographic Range

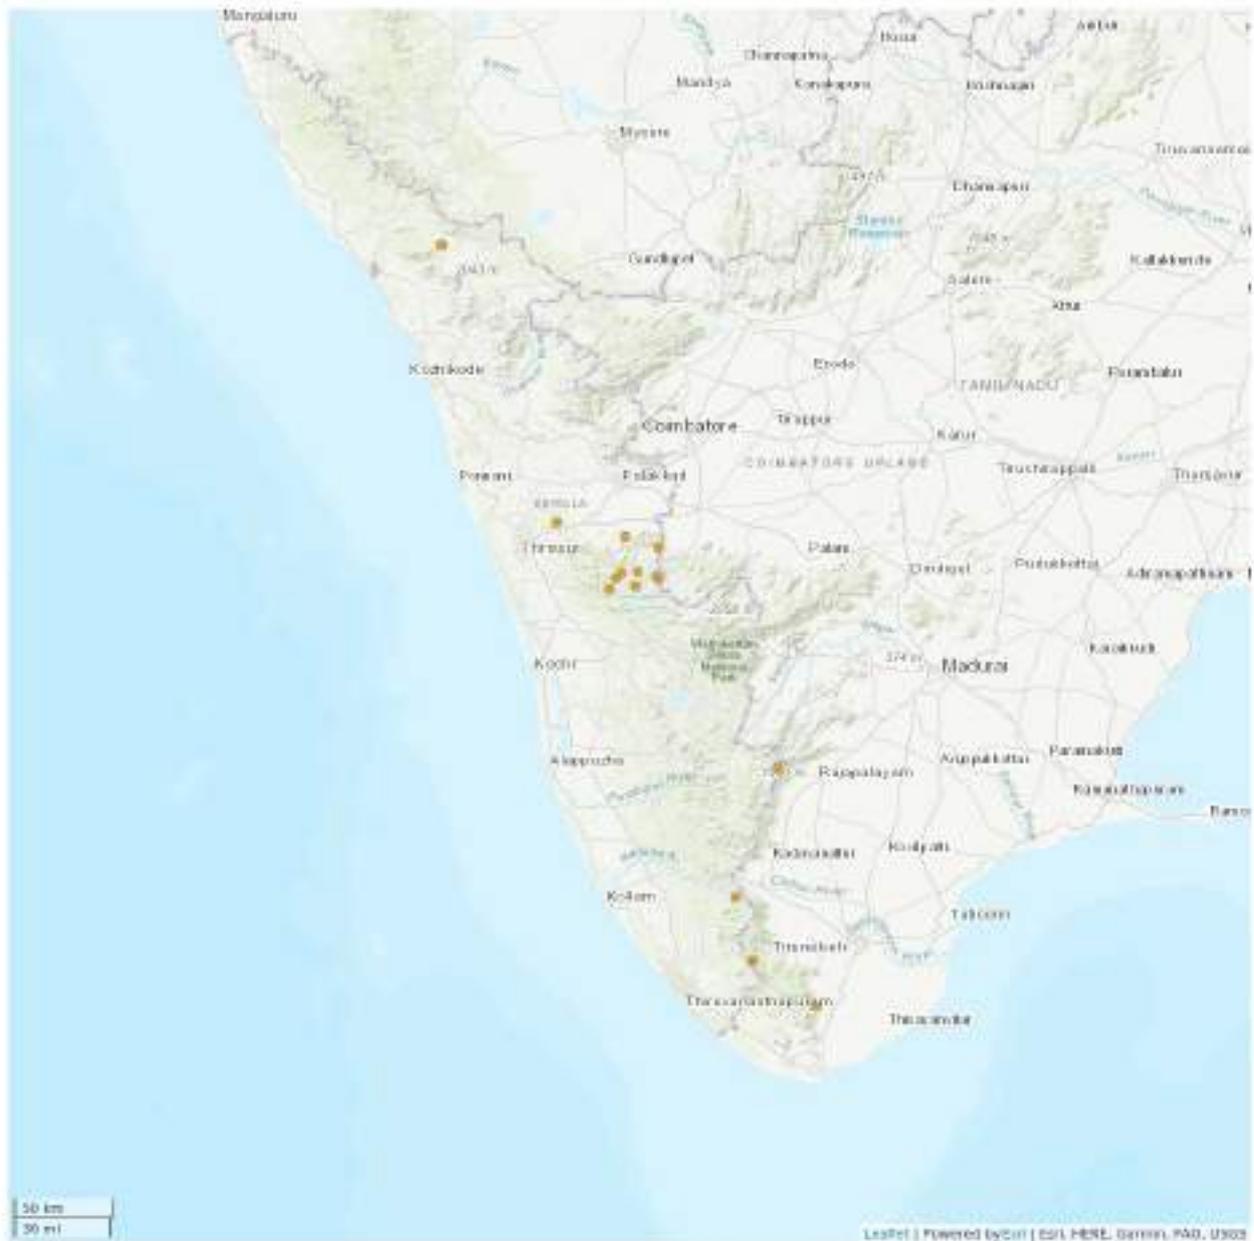

Range Description:

It appears to be scattered sparsely in the southern end of the Western Ghats.

Country Occurrence:

Native, Extant (resident): India (Karnataka, Kerala, Tamil Nadu)

Population

The population size and trend for this species are currently unknown.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

An understorey tree of evergreen forest, ascending to altitudes of 1,200 m.

Systems: Terrestrial

Threats (see Appendix for additional information)

Habitat loss because of forest cover loss is a possible threat for all species of *Orophea* (Hansen *et al.* 2013). This species occurs in areas that have been subject to habitat loss primarily from conversion to monoculture forest plantations, agricultural expansion and urbanisation.

Conservation Actions (see Appendix for additional information)

Occurs in Wynaad in the Nilgiri Hills Biosphere Reserve and forest reserves.
